

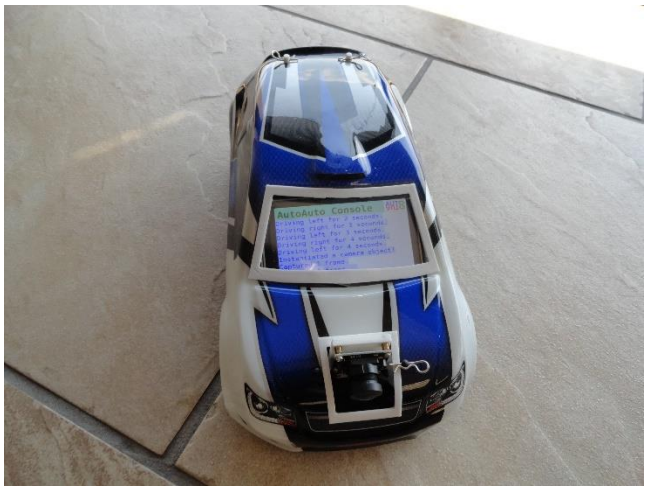
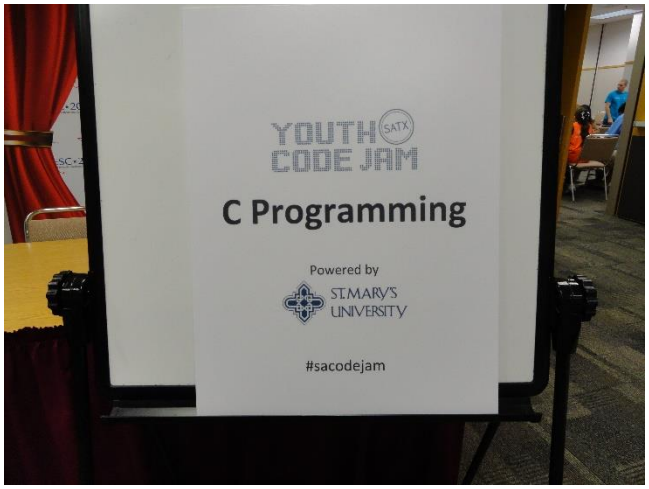
We did a robot demo outreach at the San Antonio Youth Code Jam. A lot of people attended. One of our neighbor exhibitors was a start-up company from Austin called “Auto Auto” meaning Autonomous Automobiles. Their demo let kids code cars that also had cameras and sensors.



At the Youth Code Jam, I had a display showing a Rubik's Cuber, a Mindstorm robot that can solve a Rubik's Cube! We also showed a FTC style robot, along with a drivable FIRST Lego League robot!



These were some other exhibits throughout the event!

I even checked out the Virtual Reality station, and they let me try on Augmented Reality goggles, which were really neat!
